21./ Supervised learning is

- modeling of the and dependencies between the prediction output and prediction input and get the result, the future data will be following the old result.
- human is a teacher, it's provide the training data for the ~~input and~~ prediction input and output

24./ Elucidate any 2 challenges of Machine learning

1. Difficult to find the dataset that give accurate solution to the problem. It means that based on my experience, dataset is everywhere but finding the right dataset to our current problem is really hard sometime the accuracy is low.

2. Some prediction need to depends on the others vector. For example: Amazon Online Prediction, we ~~need~~ can do the prediction but we couldn't get exact data of human interest or their favourite things so the accuracy is quite not correct.

3. Finding the technique to predict on our problems

28./ Data pre-processing is a way or technique to ~~study and filtering~~ ~~machine learning algorithms.~~ transform raw data into the format that the computer can understand

32/. Name few hyperparameters of machine learning

- ~~learning-Q~~
- ~~Moment temp - peter~~ r θ
- n estimater
- rmse
- r2 score

26/ Distinguish between the terms

Structured	Semi-Structured
- High Degree data	- some Degree data
- Can be readable by computer	- need to do data processing in order to make computer understand
- Store in spreadsheet	- For example: (Json)
- Example: (csv..)	

23/. Regression analysis: is the analyze related the numerical data.

25/2 Major applications of data science

- Health Sector: we use data science to predict the symthons of the patience
- prediction: prediction of order Ex: Amazon Online Prediction System

27/ In order to find out the outlier in the data we need to know

- Virtualization
- calculate distance.

31/ K in k-mean algorithm mean the number of class.

mean

32/ 99% Number of accuracy of Ml Model has high accuracy of successful

- 30% mean need more time to trend testing dataset

33/ is unsupervised learning for prediction data.

29. because big data so difficult to handle
