

Name: Biology Student Roll No: 101

Q1. c

Q2. Photosynthesis is how green plants make food using sunlight, CO_2 and water, giving out oxygen.

Q3. Arteries carry oxygen rich blood away from heart with thick walls and high pressure. Veins carry deoxygenated blood back to heart with thin walls and valves.

Q4. Digestion starts in the mouth by chewing and saliva. In the stomach acid and enzymes break the food. The small intestine absorbs the nutrients into blood and the large intestine takes water, waste goes out.

Q5. A neuron is a nerve cell. It has dendrites to receive signals, a cell body with nucleus, and an axon to send the impulse. Myelin sheath covers axon to make it fast. It passes signals across synapse using chemicals.
