- | | |
|-------|-------|
| 1. D | 11. B |
| 2. A | 12. C |
| 3. B | 13. B |
| 4. C | 14. C |
| 5. B | 15. B |
| 6. D | 16. C |
| 7. A | 17. B |
| 8. C | 18. C |
| 9. D | 19. B |
| 10. B | 20. B |

II.

21. supervised learning is a model for prediction base on ~~lable~~ data of the input (feature) and the output (target)

25. 2 major application of data science

- Image reconiztion
- neural language proccessing

II

27. we can find outlier of data sets by using some technique such as 2-score or plot it into graph.
29. data normalization required in k-NN because it's process to transfer data into a smaller ~~ran~~ range.
22. by seeing the result of ML we can say that this model is not relizable and not accuracy in real-time data, since it is get high accuracy only with the train data, but get very low accuracy with testing data.
26. distinguish between the terms.
- + structured data
 - well structure data format in row and column
 - understandable
 - easy to take time
 - + semi-structured data
 - some parts are structure and some parts are not
 - ~~un-categories data~~ data in the row and column but som in json
28. data pre-processing is a proccess to cleaning our data set.
24. Elucidate any two challenges of machine learning
- the accuracy difference expirement in algorithm
 - difficulty to find a suitable data sets.

II

23. regression analysis is a supervised learning use to predict the ~~Quant~~ Continuous values.

34 Comment on the performance of the classifiers.

the first and the ~~third~~ third classifiers, we can clearly see that SVM was completely split the data into 2 class ~~but~~ without data remaining but the second classifiers, we see that we lost 1 data type of each class when we split it out.

13. regression analysis is a supervised learning use to predict the
continuous values.

14. comment on the performance of the classifiers.

the first and the third classifiers, we can clearly see that SVM was
completely split the data into 2 classes without data remaining but
the second classifiers, we see that we lost 1 data type of each
class when we split it out.
