17). A

20). C

21). Supervised learning is model that trained with label data and it is used to predict the output for the given input.

27). We can find out an outlier in the data by classify the data and point out the different one as an outlier.

- 26). Structured data is a well organized data which has a proper structure while semi-structured data is somewhere in the middle of structured and unstructured data.
- 25). The two major application of data science are Algorithm and Data Type.
- 28). Data pre-processing is a process which we prepare the data to be ready to use in the data science application.
- 22). A model M1 gives 90 99% of accuracy for training dataset and it gives only 30% of accuracy for testing dataset. I would say the model M1 model was not trained properly since it only give 30% of accuracy in the testing dataset.

7. B

3. B

4. C

~~9. E~~

~~20. B~~

- 5). B
6). A
18). C
19). C

24. Two challenges of Machine learning are Delta processing and data training.

32. Machine learning algorithm:

- Linear regression
- SVM
- KNN
- Logistic Regression
- K-means clustering
